Post-doctoral position in primate basal ganglia electrophysiology in the
Wichmann/Galvan lab

We are seeking a post-doctoral fellow to conduct research in a non-human primate model of Parkinson’s disease. The goal of this research is to gain a deeper understanding of the functions and connectivity of the basal ganglia circuits in normal and parkinsonian monkeys. The project involves the use of *in vivo* electrophysiology and optogenetic techniques in awake monkeys, as well as extensive post-mortem histology. The successful applicant will gain hands-on experience with first-rate basal ganglia research in the sponsor’s laboratory, and will be able to take advantage of the exceptional educational opportunities offered through the large and vibrant neuroscientific community at Emory University, with its strong emphasis on basal ganglia research.

Interested candidates should contact Adriana Galvan (agalvan@emory.edu)
